# Enable Nuvolo GIS Properties
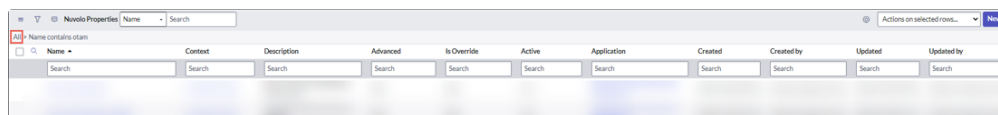

> ▤ **User Roles:** GIS Administrator

By enabling the Nuvolo GIS Properties, you will be able to view the location of one or more Work Orders or Assets on the map using GIS.
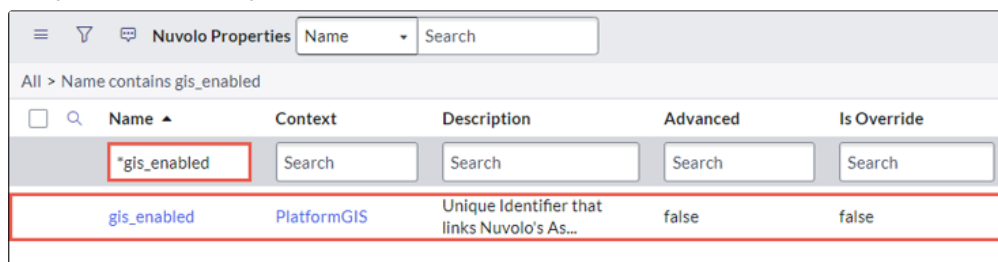

To enable GIS Properties

1. Navigate to **OT Asset Mgmt (OTAM) Admin** > **Administration** > **Nuvolo Properties - all**. The Nuvolo Properties list appears.

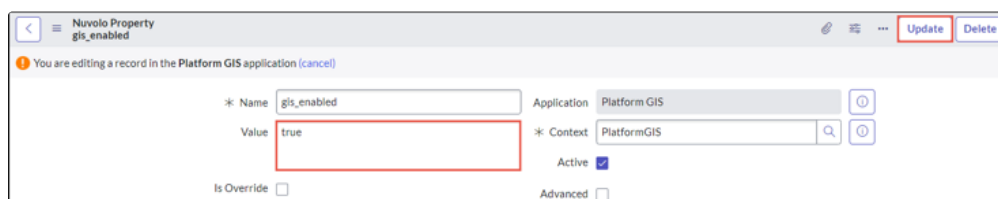

2. If there is a pre-set filter, click **All** to cancel it.

3. In **Name**, search for the **gis_enabled** Property and open that record. The gis_enabled Nuvolo Properties form opens.

4. Set the **Value** field to **true.**

5. Click **Update**.

> ⓘ **Note:** If the Value field is set false, then the GIS tab will not be shown in the Asset record.

> ℹ️ **Prerequisite:** Make sure the GeoTag of Asset Type is selected Point, Line, or Polygon, not None.

To validate that a GIS tab appears on the Asset record

1. Navigate to **Asset Management** > **Inventory > Devices**. The Devices list opens.

2. Click an Asset Tag from the list. The Device record form opens.

3. Scroll down and see that the GIS tab now appears in the related tabs.
